

## Lecture 20: Course Review

### 6.006: Introduction to Algorithms

- Goals:
  1. Solve hard computational problems (with **non-constant-sized inputs**)
  2. Argue an algorithm is **correct** (Induction, Recursion)
  3. Argue an algorithm is “**good**” (Asymptotics, Model of Computation)
    - (effectively communicate all three above, to human or computer)
- Do there always exist “good” algorithms?
  - Most problems are not solvable efficiently, but many we think of are!
  - **Polynomial** means polynomial in size of input
  - **Pseudopolynomial** means polynomial in size of input AND size of numbers in input
  - NP: **Nondeterministic Polynomial** time, polynomially checkable certificates
  - NP-hard: set of problems that can be used to solve any problem in NP in poly-time
  - NP-complete: intersection of NP-hard and NP

### How to solve an algorithms problem?

- Reduce to a **problem** you know how to solve
  - Search/Sort (Q1)
    - \* Search: Extrinsic (Sequence) and Intrinsic (Set) Data Structures
    - \* Sort: Comparison Model, Stability, In-place
  - Graphs (Q2)
    - \* Reachability, Connected Components, Cycle Detection, Topological Sort
    - \* Single-Source / All-Pairs Shortest Paths
- Design a new recursive algorithm
  - Brute Force
  - Divide & Conquer
  - Dynamic Programming (Q3)
  - Greedy/Incremental

## Next Steps

- (U) 6.046: Design & Analysis of Algorithms
- (G) 6.851: Advanced Data Structures
- (G) 6.854: Advanced Algorithms

## 6.046

- Extension of 6.006
  - **Data Structures:** Union-Find, Amortization via potential analysis
  - **Graphs:** Minimum Spanning Trees, Network Flows/Cuts
  - **Algorithm Design (Paradigms):** Divide & Conquer, Dynamic Programming, Greedy
  - **Complexity:** Reductions
- Relax Problem (change definition of correct/efficient)
  - **Randomized Algorithms**
    - \* 6.006 mostly deterministic (hashing)
    - \* Las Vegas: always correct, probably fast (like hashing)
    - \* Monte Carlo: always fast, probably correct
    - \* Can generally get faster randomized algorithms on structured data
  - **Numerical Algorithms/Continuous Optimization**
    - \* 6.006 only deals with integers
    - \* Approximate real numbers! Pay time for precision
  - **Approximation Algorithms**
    - \* Input optimization problem (min/max over weighted outputs)
    - \* Many optimization problems NP-hard
    - \* How close can we get to an optimal solution in polynomial time?
- Change Model of Computation
  - Cache Models (memory hierarchy cost model)
  - Quantum Computer (exploiting quantum properties)
  - Parallel Processors (use multiple CPUs instead of just one)
    - \* Multicore, large shared memory
    - \* Distributed cores, message passing

## Future Courses

### Model

- Computation / Complexity (6.045, 6.840, 6.841)
- Randomness (6.842)
- Quantum (6.845)
- Distributed / message passing (6.852)
- Multicore / shared memory (6.816, 6.846)
- Graph and Matrix (6.890)
- Constant Factors / Performance (6.172)

### Application

- Biology (6.047)
- Game Theory (6.853)
- Cryptography (6.875)
- Vision (6.819)
- Graphics (6.837)
- Geometry (6.850)
- Folding (6.849)
