PYTHON REGULAR EXPRESSION CHEATSHEET Cheat Sheet by [sahusourabh](#)

Regular expressions in one of the important topic in python. It is widely used by developer and testers. If you want to play around with data. One should know regular expressions.

Quantifiers

*	0 or more	{5}	exactly 5
+	1 or more	{5,}	5 or more
?	0 or 1	{1,5}	1,2,3,4 or 5

What you want do with regular expression?

Regular expressions can be used to check if a string contains the specified search pattern.

Anchors

Regular expressions are used to remove the unnecessary words from the data and formatting the data is possible using Regular Expressions. It also helps in finding out the correctness of the data and even operations such as finding and replacing and formatting the data is possible using

- ^ Start of string, or start of line in multi-line pattern
- \A Start of string
- \$ End of string, or end of line in multi-line pattern
- \Z End of string
- \b Word boundary
- \B Not word boundary
- \< Start of word
- \> End of word

Characters

- \c Control character
- \s White space
- \S Not white space
- \d Digit
- \D Not digit
- \w Word
- \W Not word
- \x Hexadecimal digit
- \O Octal digit

Special Characters

- \n New line
- \r Carriage return
- \t Tab
- \v Vertical tab
- \f Form feed
- \xxx Octal character xxx
- \xhh Hex character hh

String Manipulation

- \$` Before matched string
- \$' After matched string
- + Last matched string
- \$& Entire matched string

```
import re
pattern = '^a...s$'
test_string = 'abyss'
result = re.match(pattern, test_string)
if result:
    print("Search successful.")
else:
    print("Search unsuccessful.")
```

Group/Ranges

`.` any single character

`(a|b)` a or b

`[abc]` Range (a or b or c)

`[^abc]` Not (a or b or c)

`[a-z]` Lower case letter from a to z

`[A-Z]` Upper case letter from A to Z

`[0-10]` Digit from 0 to 10

`\x` Group/-sub-pattern number "x"

Pattern Modifiers

`g` Global match

`i` Case-insensitive
`*`

`m` Multiple lines
`*`

`s` Treat string as single line
`*`

`x` Allow comments and whitespace in pattern
`*`

`e` Evaluate replacement
`*`

`U` Ungreedy pattern
`*`

USE

```
import re
string = 'hello 12 hi 89. Its me 343'
pattern = '\d+'
result = re.findall(pattern, string)
print(result)

output#1289343
```

String Manipulation

`$`` Before matched string

`$'` After matched string

`+` Last matched string

`$&` Entire matched string

posix

Escape Sequences

\	Escape following character
\Q	Begin literal sequence
\E	End literal sequence

Assertions

?=	Lookahead assertion
?!	Negative lookahead
?<=	Lookbehind assertion
?!= or ?<!	Negative lookbehind
?>	Once-only Subexpression
?()	Condition [if then]
?()	Condition [if then else]
?#	Comment

USE

```
import re

phone = "MY phone"

# Remove anything
num = re.sub(r'\D', '')
print ("Phone Num : ", num)
```

[[:upper:]]	Upper case letters	[A-Z]
[[:lower:]]	lower case letter	[a-z]
[[:alpha:]]	alphabets	[a-zA-Z]
[[:alnum:]]	alphanumeric	[a-zA-Z0-9]
[[:digit:]]	Digits	[0-9]
[[:xdigit:]]	Hexadecimal	[A-Fa-f0-9]
[[:punct:]]	Punctuation	[!"#\$%&'()*+,-./:;<=>?@[\]^_`{ }~]
[[:blank:]]	Space and tab	
[[:space:]]	Blank characters	
[[:cntrl:]]	Control character	
[[:graph:]]	Printed characters	
[[:print:]]	Printed characters and spaces	
[[:word:]]	Digits, letters and underscore	

USE

```
import re  
  
string = """I am  
Sourabh and my  
mobile no is  
9479864026"""  
  
regex = '\d+'  
  
match = re.findall(r-  
egex, string)  
  
print(match)
```
